
NATURAL RESOURCES COMMISSION**Information Bulletin #2 (Tenth Amendment)**

SUBJECT: Roster of Indiana Animals, Insects, and Plants that are Extirpated, Endangered, Threatened, or Rare (also described as Special Concern).

I. INTRODUCTION

Following is a roster of animals, insects, and plants considered in Indiana by the Department of Natural Resources to be extirpated, endangered, threatened, or rare (also described as special concern). The roster is intended to help identify these animals and plants, and the hope is that a better understanding of the fragility of these species will promote intelligent land use decisions. This roster may also be cross-referenced in rules and other documents directed to land use management.

Inclusion of an animal or plant on the roster is determined based on the best current information available. Adjustments to the listing will be required as additional data becomes available to the department and as the conditions of species change. For this reason, adjustments will be needed periodically to this roster, and those adjustments will be set forth in later editions of the roster.

Additional information concerning particular species included on the roster may be obtained from the Department of Natural Resources, Division of Fish and Wildlife and Division of Nature Preserves. For more information, or to suggest additions, deletions, or modifications to the listing, contact the following:

IV. INSECTS

1. Extirpated: An insect is considered state extirpated if any of the following three conditions occur: (a) A species is declared extirpated by a specialist for the species, family, or order to which the insect belongs. (b) A species has not been located in Indiana as a naturally occurring breeding population for more than 15 years, but the species exists outside Indiana as a wild population. (c) A species appears on a federal list as being extirpated in Indiana. Applying this standard, the following species are believed extirpated in Indiana:

Ephemeroptera (Mayflies)

Pentagenia robusta, "robust pentagenian burrowing mayfly"

Endangered: An insect species is considered state endangered if its prospects for survival or recruitment within Indiana are in immediate jeopardy, and is in danger of disappearing from the state, where any of the following three conditions occur: (a) A species which may occur in Indiana is classified as endangered by the

federal government. (b) A species is biologically dependent on a threatened or endangered plant species. (c) A species is known from fewer than five sites in Indiana.

An insect is also considered endangered if the insect is listed as extirpated but is later rediscovered in Indiana, whether the population is endemic or believed to be recently adventive. The discovery of any life stage of an extirpated or endangered species is fiduciary evidence that a population exists.

An endangered species of insect does not include any of the following: (a) A species that is not known as a population in Indiana but which ranges into the state from Michigan, Ohio, Illinois, or Kentucky. (b) A nonregulated adventive species. (c) A species regulated under [IC 14-24](#) and [312 IAC 18-3](#) (including a species used for biological control).

VI. HISTORY

The initial roster was published February 1, 1992 (15 IR 848), republished April 1, 1992 (15 IR 1312); and subsequently amended to include additional species and published on February 1, 2005 (28 IR 1581).

Since 2005, revisions have been made to several of the endangered species lists. The term "special concern" replaced the references to "rare" as it relates to wild animals and is expanded to include species in a legal status transition. Federal funding is available for species that are endangered or of special concern.

In the fourth amendment, posted at [20070815-IR-312070469NRA](#) on August 15, 2007, "rare", "threatened", and "extirpated" classifications for insect species were retained. Classification definitions were added for vascular plant species. In this document, species are reclassified and scientific names were modified.

In the fifth amendment, posted at [20120125-IR-312120047NRA](#) on January 25, 2012, the listing for endangered reptiles and amphibians was modified. Notable was removal of the American bald eagle from the endangered species list. Some species removed from the endangered list were redesignated as "special concern". Amendments were made to use scientific names that are consistent with those for species of animals listed in [312 IAC 9](#).

In the sixth amendment, posted at [20140129-IR-312140023NRA](#) on January 29, 2014, the listing for endangered birds, mollusks, insects, and vascular plants was modified. Notable was the removal of the peregrine falcon from the endangered species list. The listing of mammals of special concern added the eastern small-footed myotis and removed the river otter and bobcat. A large number of additions were made to the listing of rare insects.

In the seventh amendment, posted at [20151007-IR-312150339NRA](#) on October 7, 2015, the ruffed grouse and the rufa red knot were added to the species of special concern for birds. The name of the northern cavefish is changed to the Hoosier cavefish. Scientific names are modified to accurately reflect the current, published scientific names for each species. A few changes have also been made to the listing of extirpated and endangered vascular plants.

In the eighth amendment, posted at [20171122-IR-312170551NRA](#), the black bear was added to the species of special concern for mammals, and the northern bobwhite and American woodcock were added to the special concern list for birds. The red-shouldered hawk was removed from the special concern list for birds. The American eel was added to the special concern list for fish, while the longnose sucker, Ohio River muskellunge, lake whitefish, cypress darter, and Tippecanoe darter were removed from the special concern list for fish.

In the ninth amendment, posted at [20181128-IR-312180513NRA](#), three species of bats have been added to the endangered list of mammals. The osprey was removed from the state list of endangered birds and moved to the special concern list, while the rufa red knot was added to the state endangered species list of birds. Six species were also removed from the list of endangered species of mussels, because they are no longer found in the state and are considered to have been extirpated. The northern leopard frog was removed from the special concern list, and the plains gartersnake was added to the special concern list for reptiles.

In this amendment, the alligator gar was added to the special concern list of fish. Eight species of mussels were added and one species was removed from the special concern list. A number of changes were made to the lists of insects and plants, and definitions of terms were modified for vascular plants.
